During her time with us Joan will be reflecting with us on the wisdom she has discovered through her life journey as a Dominican Sister and as a Neuroscientist. Living in both worlds helped her discover that fundamental truths for living an authentic, fulfilling life are coded within and between our cells. In the course of her personal development, she began to utilize scientific principles as metaphors and tools to expand consciousness. It is this personal philosophy that she now uses as the foundation for her coaching work. For more info and *free* samples of her lectures check out Joan's new website www.cellular-wisdom.com!
